

IN THE CLAIMS:

This listing of claims will replace all prior versions, and listings, of claims in the application:

1. (Currently Amended) A noise suppressor unit ~~for installing and mounting a common mode choke for a noise suppressor onto a circuit board, the common mode choke for the noise suppressor comprising: a toroid coiled with at least two coils, which coils have two coil ends, wherein the noise suppressor unit comprises~~

a circuit board base holder,

a onto which the toroid coiled with at least two coils, each coil comprising two coil ends, is positioned, the toroid being coiled with at least two coils,

the circuit board holder comprising connecting plates that are electrically insulated from each other, wherein,

the toroid is positioned on the circuit board base, each of the coil ends is connected to one of the connecting plates, the connecting plates being positioned to form electrical connections with a circuit board.

2. (Previously Amended) A noise suppressor unit as claimed in claim 1, wherein the connecting plates are so dimensioned and designed that the toroid is apart from the connecting plates.

3. (Previously Amended) A noise suppressor unit as claimed in claim 1, wherein each connecting plate comprises an upper connecting plate, to which one coil end at the most is connected, and a lower connecting plate, which is in an electrical connection with the upper connecting plate and which is intended to be surface mounted to mounting surface areas in the circuit board.

4. (Previously Amended) A noise suppressor unit as claimed in claim 3, wherein the upper connecting plates are so dimensioned and designed that the toroid is apart from the upper connecting plates.

5. (Previously Amended) A noise suppressor unit as claimed in claim 3, wherein the lower connecting plates are substantially rectangular.

6. (Previously Amended) A noise suppressor unit as claimed in claim 1, wherein it comprises two coils and four connecting plates.

7. (Currently Amended) A noise suppressor unit as claimed in claim 6, wherein the circuit board ~~holder~~ base is substantially rectangular and that each connecting plate is located at one corner of the circuit board base ~~holder~~.

8. (Previously Amended) A noise suppressor unit as claimed in claim 1, wherein the connecting plates are made of copper or copper metal.

9. (Currently Amended) A noise suppressor unit as claimed in claim ~~1~~12, wherein the place for lifting means is located ~~are~~ in the middle opening of the toroid.

10. (Currently Amended) A noise suppressor unit as claimed in claim 9, wherein the place for lifting means is located ~~are~~ on the surface of the circuit board holder.

11. (New) The noise suppressor unit of claim 1, wherein the toroid coiled with at least two coils forms a common mode choke.

12. (New) A noise suppressor unit according to claim 1 wherein the suppressor unit has a place for lifting means to grab the noise suppressor.

13. (New) A noise suppressor unit comprising:
a circuit board base,
a toroid positioned on the circuit board base,
a place for lifting means to grab the noise suppressor unit located at the middle opening of the toroid.

14. (New) A noise suppressor unit according to claim 13, wherein the place for lifting means is located on the surface of the circuit board base.
